

Example 1:

Create a React Application named “cricketapp” with the following components:

1. ListofPlayers

- Declare an array with 11 players and store details of their names and scores using the map feature of ES6

```
return(  
  players.map((item)=>  
    {  
      return(  
        <div>  
          <li>Mr. {item.name}<span> {item.score}</span></li>  
        </div>  
      )  
    })  
  )  
)
```

- Filter the players with scores below 70 using arrow functions of ES6.

```
return(  
  players.map((item)=>  
    {  
      if(item.score<=70)  
      {  
        players70.push(item);  
      }  
    }  
  ),  
)
```

2. IndianPlayers

- a. Display the Odd Team Player and Even Team players using the Destructuring features of ES6

```
export function OddPlayers([first,, third,,fifth]) {
  return(
    <div>
      <li> First : {first} </li>
      <li> Third : {third} </li>
      <li> Fifth : {fifth}</li>
    </div>))}

```

- b. Declare two arrays T20players and RanjiTrophy players and merge the two arrays and display them using the Merge feature of ES6

```
const T20Players=['First Player','Second Player','Third Player'];
const RanjiTrophyPlayers=['Fourth Player','Fifth Player','Sixth Player'];
export const IndianPlayers=[...T20Players, ...RanjiTrophyPlayers]

```

Display these two components in the same home page using a simple if else in the flag variable.

Output:

When Flag=true

Welcome to Cricket App

All Players

Virat - 95
Rohit - 88
Dhoni - 65
Rahul - 45
Jadeja - 70
Shami - 60
Ashwin - 78
Bumrah - 90
Gill - 55
Pant - 82
Sundar - 72

Players with Score below 70

Dhoni - 65
Rahul - 45
Shami - 60
Gill - 55

When Flag=false

Welcome to Cricket App

Odd Team Players

Rohit
Rahul
Shami

Even Team Players

Virat
Dhoni
Jadeja

Merged T20 and Ranji Trophy Players

Virat
Rohit
Bumrah
Pujara
Saha
Karun

Example 2:

Create a React Application named “officespacerentalapp” which uses React JSX to create elements, attributes and renders DOM to display the page.

Create an element to display the heading of the page.

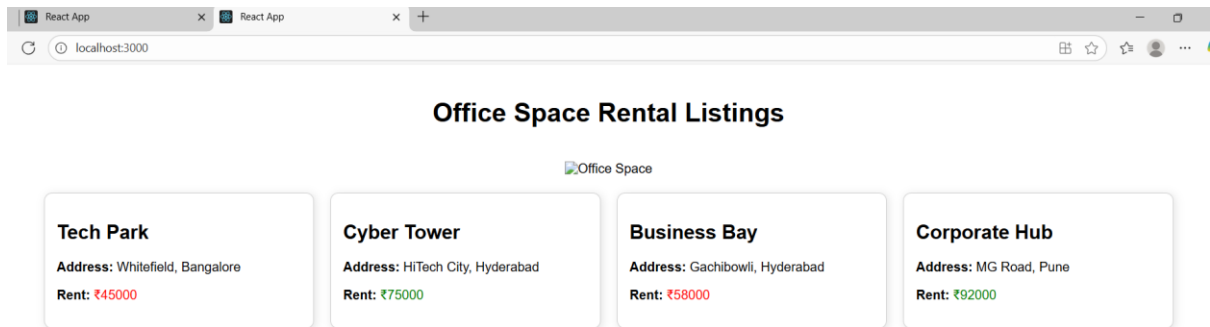

Attribute to display the image of the office space

Create an object of office to display the details like Name, Rent and Address.

Create a list of Object and loop through the office space item to display more data.

To apply Css, Display the color of the Rent in Red if it's below 60000 and in Green if it's above 60000.

Output:

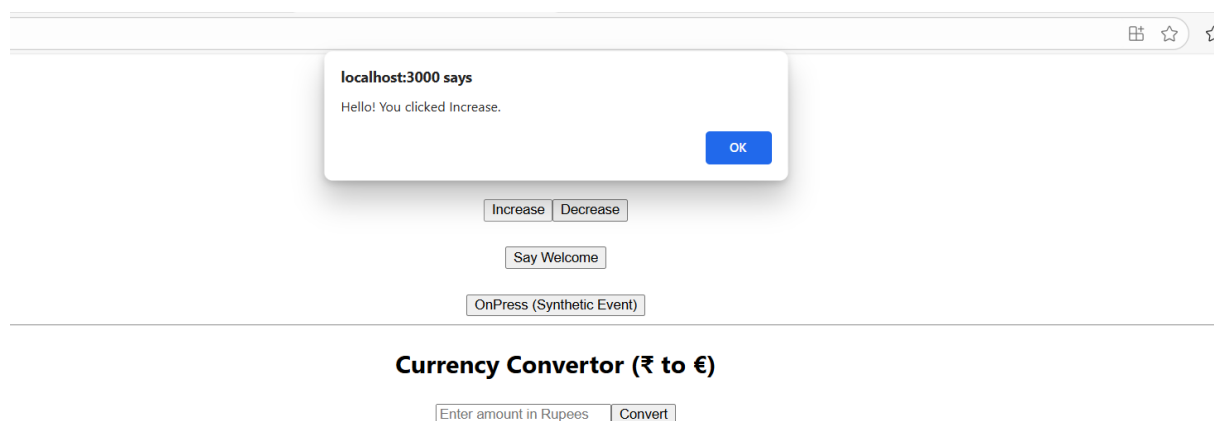

Example 3:

Create a React Application “eventexamplesapp” to handle various events of the form elements in HTML.

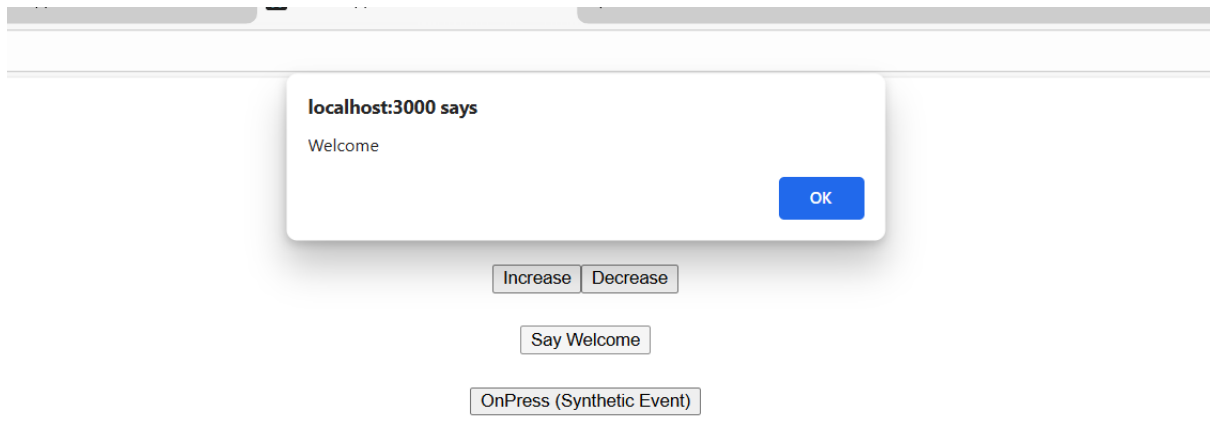

1. Create “Increment” button to increase the value of the counter and “Decrement” button to decrease the value of the counter. The “Increase” button should invoke multiple methods.

- a. To increment the value

- b. Say Hello followed by a static message.

2. Create a button “Say Welcome” which invokes the function which takes “welcome” as an argument.

Currency Converter (₹ to €)

Enter amount in Rupees Convert

3. Create a button which invokes synthetic event "OnPress" which display "I was clicked"

Create a "CurrencyConvertor" component which will convert the Indian Rupees to Euro when the Convert button is clicked.

Handle the Click event of the button to invoke the handleSubmit event and handle the conversion of the euro to rupees.

Out put:

Event Handling Examples

Counter Value: 1

Increase Decrease

Say Welcome

OnPress (Synthetic Event)

Currency Converter (₹ to €)

10000 Convert

Converted Amount: €110.00

Example 4:

Create a React Application named “ticketbookingapp” where the guest user can browse the page where the flight details are displayed whereas the logged in user only can book tickets.

The Login and Logout buttons should accordingly display different pages. Once the user is logged in the User page should be displayed. When the user clicks on Logout, the Guest page should be displayed.

Out put:

Ticket Booking App

Logout

Welcome User!

You can now book tickets.

Available Flights:

Delhi → Mumbai @ ₹4500

Bangalore → Chennai @ ₹3900

Kolkata → Goa @ ₹5200

Book Ticket

Example 5:

Create a React App named "bloggerapp" in with 3 components.

1. Book Details
2. Blog Details
3. Course Details

Implement this with as many ways possible of Conditional Rendering

Out put:

Blogger App
